Sump, Effluent and Sewage pumps
INSTALLATION MANUAL

Read and save these instructions. This manual contains very important Safety Warnings and Operating Instructions. You will need to refer to it before attempting any installation or maintenance. Always keep this manual with the unit so that it will be easily accessible. Failure to read and follow these warnings and instructions could result in property damage, serious injury or death.

DESCRIPTIONS

SUMP PUMPS
Sump pumps are automatic pumps used to remove ground water from sump pits. The most common application is for basement drainage to prevent flooding in residential buildings. These sumps are designed to pump clear water only.

EFFLUENT PUMPS
Effluent pumps are pumps used to remove gray water from septic tanks, sump pits or laundry tray systems. Gray water is waste water from baths, sinks, washing machines, and other kitchen appliances. The pumps are designed to pass solids up to 3/4 in.

SEWAGE PUMPS
Sewage pumps are pumps used to remove waste water that contains solids up to 2 inches in diameter. The most common application is for draining bathroom waste water to a sewer or septic line.

UNPACKING
Inspect your pump. Occasionally, products are damaged during shipment. If the unit is damaged, return the unit to the place of purchase for replacement.

READ & FOLLOW ALL INSTRUCTIONS
SAVE THESE INSTRUCTIONS — DO NOT DISCARD

SAFETY GUIDELINES
This manual contains information that is very important to know and understand. This information is provided for SAFETY and to PREVENT EQUIPMENT PROBLEMS.
To help recognize this information, observe all safety information labelled danger, warning, caution, and notice.

DO NOT USE AN EXTENSION CORD. Extension cords could present a safety hazard if not sized properly, become damaged or the connection falls into the sump. If receptacle is not within reach of the pump's power cord, contact a qualified licensed electrician to install a new receptacle.

ALWAYS DISCONNECT THE PUMP from power supply before installing, servicing or making any adjustments.

DO NOT SUBMERGE PEDESTAL MOTOR or allow motor to be exposed to water.

DO NOT WALK on the floor when water is present until all power is turned off. If the electric panel is in the basement, call an electrician.

NEVER HANDLE A PUMP or motor with wet hands or when standing on a wet or damp floor while the pump is plugged into the power supply.

WASH HANDS AFTER HANDLING. According to the state of California (Prop 65), this product may contain chemicals known to the state of California to cause cancer and birth defects or other reproductive harm.

RISK OF ELECTRIC SHOCK. This pump has not been investigated for use in swimming pool and marine areas.

DO NOT USE TO PUMP FLAMMABLE OR EXPLOSIVE FLUIDS such as gasoline, fuel oil, kerosene, etc. Do not use in a flammable and/or explosive atmosphere. Pump should only be used to pump clear water. Personal injury and/or property damage could result.

IMPORTANT SAFETY INFORMATION

WARNING
WARNING INDICATES A POTENTIALLY HAZARDOUS SITUATION WHICH, IF NOT AVOIDED, COULD RESULT IN DEATH OR SERIOUS INJURY.

RISK OF ELECTRIC SHOCK. TO REDUCE THIS RISK, OBSERVE THE FOLLOWING WARNINGS:

MAKE SURE THERE IS A PROPERLY GROUNDED RECEPTACLE AVAILABLE. This pump is supplied with a grounding conductor and grounding-type attachment plug. To reduce the risk of electric shock, be certain that it is connected only to a properly grounded, grounding-type receptacle.

NEVER REMOVE THE GROUND PRONG from the plug or bypass the grounding wires.

FOR ADDITIONAL SAFETY the receptacle should be protected with a ground fault circuit interrupter (GFCI). All wiring must be performed by a licensed electrician and comply with the National Electric Code and all applicable local codes and ordinances.

DO NOT REMOVE POWER SUPPLY CORD and strain relief or connect conduit directly to the pump.

MAKE SURE THE POWER SUPPLY HAS A FUSE OR CIRCUIT BREAKER rated to handle the current (amps) noted on the nameplate of the pump.
CAUTION

CAUTION INDICATES A POTENTIALLY HAZARDOUS SITUATION WHICH, IF NOT AVOIDED, MAY RESULT IN MINOR OR MODERATE INJURY.

TO REDUCE THE RISK OF HAZARDS THAT CAN CAUSE INJURY OR PROPERTY DAMAGE, OBSERVE THE FOLLOWING WARNINGS:

IF THIS PUMP CONTAINS A SWITCH FOR AUTOMATIC OPERATION, IT IS THE INSTALLER’S RESPONSIBILITY TO MAKE SURE THE SWITCH IS ABLE TO OPERATE WITHOUT ANY OBSTRUCTIONS WITHIN THE BASIN. It is recommended that the installer test and observe the pump’s operation for several cycles after installation.

IT IS RECOMMENDED TO USE RIGID PIPING AND FITTINGS to secure the pump in the basin and reduce pump movement. Pump movement can prevent the switch from operating correctly.

TYPICAL SUMP INSTALLATION DIAGRAMS

12. Switch Arm

MINIMUM BASIN DIAMETER (SEE CHART B, COLUMN A)

MAXIMUM BASIN HEIGHT (SEE CHART B, COLUMN B)

THIS PUMP SHOULD BE INSPECTED 3 TO 4 TIMES PER YEAR for pump movement or buildup of debris on the switch or float. Reposition pump if it has moved. Remove any debris that could interfere with the operation of the switch.

IT IS RECOMMENDED TO USE A CHECK VALVE with this pump to prevent the back-flow of fluid after each pump cycle.

DO NOT INSTALL OR OPERATE THE PUMP IF IT HAS BEEN DAMAGED IN ANY WAY.

DO NOT LIFT OR CARRY THE PUMP BY THE POWER CORD. Use the pump’s handle.

DO NOT USE THIS PUMP IN MUD, SAND, CEMENT, OIL OR CHEMICALS.

DO NOT USE SUMP AND EFFLUENT PUMPS TO HANDLE RAW SEWAGE.

AN INDEPENDENT HIGH WATER ALARM OR BACK UP PUMP SHOULD BE USED when risk of property damage from high water levels exists.

www.hallmarkind.com
TYPICAL SUMP INSTALLATION

1. This installation must be in accordance with the National Electric Code and all applicable local codes and ordinances.

2. Use a basin that is large enough to accommodate the pump. The minimum requirements for the sump pumps are:

<table>

</table>

3. Clean the basin of all debris. Position pump so the switch is away from the inlet and is clear from incoming water.

4. Assemble switch or float if needed. Refer to warranty and service parts sheet for specific directions.

5. Set the pump on a solid, level surface. Do not place pump directly on clay, earth, gravel or sand. A brick or block may be installed under the pump to provide a solid base.

6. Position pump so the switch is away from the inlet so switch is clear from incoming water. Verify the switch has at least 1 in. clearance to the side wall of the basin and is free to move throughout its movement. If optional control device or float is used, follow mounting instruction supplied with device or float.

7. Install discharge plumbing according to local, regional and state codes. Rigid PVC pipe is recommended.

8. Drill 1/8 in. “weep” hole in the discharge pipe 1 in. above the pump discharge. Water stream will be visible from the how when the pump is running. The hole must be cleaned periodically.

9. Install a union to allow for easy removal of the pump for cleaning or service.

10. Install a check valve (required) to prevent back-flow. The check valve may be positioned just above the basin to allow easy removal of the pump for cleaning and service.

11. Install a gate valve or ball valve if required by local, regional or state code.

12. Secure cords to discharge pipe to prevent possible switch entanglement. Use cable or zip ties to secure the power cords.

13. Connect pump power supply cord to a properly grounded receptacle.

14. Fill the basin with water. The pump will start when the water level has reached the switch-on level.

15. The pump will stop when the water level has reached the switch-off level.

16. Verify the switch is operating with out any obstruction from the pump, piping and basin.

17. Fill the basin with water again. While the pump is draining the basin, verify the discharge pipe is carrying the water to a point at least 3 ft. away from the foundation. If the discharge line is exposed to freezing temperatures, the pipe must be positions in a downward slope away from the foundation so any remaining water will drain away and not freeze.
TYPICAL EFFLUENT INSTALLATION

1. This installation must be in accordance with the National Electric Code and all applicable local codes and ordinances.

2. For sump applications, follow typical sump installation instructions. For effluent applications, continue to step 3.

3. Clean the basin of all debris.

4. Set the pump on a solid, level surface. Do not place pump directly on clay, earth, gravel or sand. A brick or block may be installed under the pump to provide a solid base.

5. Verify the float switch has at least 1 inch clearance to the side wall of the basin and is free to move throughout its movement.

6. If optional control device or float is used, follow mounting instruction supplied with device or float.

7. Install discharge plumbing according to local, regional and state codes. Do not reduce the discharge pipe size below that which is provided on the pump.

8. Drill a 1/8 in. “weep” hole in the discharge pipe 1 in. above the pump discharge. Water stream will be visible from the hole when the pump is running. The hole must be cleaned periodically.

9. Install a union to allow easy removal of the pump for cleaning and service.

10. Install a check valve (required) to prevent back-flow. It should be installed above the union.

11. A gate valve or ball valve should be installed above the check valve as required by local, regional or state codes.

12. Connect remaining discharge pipe. The remainder of the discharge line should be as short as possible with a minimum number of turns.

13. Secure cords to discharge pipe to prevent possible switch entanglement. Use cable or zip ties to secure the power cords.

14. Connect pump power supply cord to a properly grounded receptacle.

15. Fill the basin with water. The pump will start when the water level has reached the switch-on level. Verify the pump is operating normally.

16. Install cover

TYPICAL SEWAGE INSTALLATION

1. This installation must be in accordance with the National Electric Code and all applicable local codes and ordinances.

2. Use a basin that is large enough to accommodate the pump. The basin diameter should be a minimum of 18 inches and the depth a minimum of 24 inches.

3. Clean the basin of all debris.

4. Set the pump on a solid, level surface. Do not place pump directly on clay, earth, gravel or sand. A brick or block may be installed under the pump to provide a solid base.

5. Position pump in the basin so the switch is away from incoming water. Verify the float switch has at least 1 in. clearance to the side wall of the basin and is free to move throughout its movement.

6. Install discharge plumbing according to local, regional and state codes. Do not reduce the discharge pipe size below that which is provided on the pump.

7. Drill a 1/8 in. “weep” hole in the discharge pipe 1 in. above the pump discharge. Water stream will be visible from this hole when the pump is running. The hole must be cleaned periodically.

8. If optional control device or float is used, follow mounting instruction supplied with device or float.

9. Install a sealed basin cover to prevent debris from falling into the basin, personal injury and contain gases and odors.

10. A union should be installed above the basin to allow easy removal of the pump for cleaning and service.

11. Install a check valve (required) to prevent back-flow. It should be installed above the union.

12. A gate valve or ball valve should be installed above the check valve as required by local, regional or state codes.

13. Connect remaining discharge pipe. The remainder of the discharge line should be as short as possible with a minimum number of turns.

14. A vent pipe is required. It removes gases and odors and should be installed as required by local, regional or state codes.

15. Secure cords to discharge pipe to prevent possible switch entanglement. Use cable or zip ties to secure the power cords.

16. Connect pump power supply cord to a properly grounded receptacle.

17. Fill the basin with water. The pump will start when the water level has reached the switch-on level. Verify the pump is operating normally.

MAINTENANCE

WARNING
ALWAYS DISCONNECT THE PUMP FROM POWER SUPPLY before installing, servicing or making any adjustments.

WARNING
LET PUMP COOL FOR A MINIMUM OF 2 HOURS BEFORE ATTEMPTING TO SERVICE. Submersible pumps contain oil that become pressurized and hot under normal operating conditions.

1. Submersible pump models have permanently lubricated bearings and require no additional lubrication.

2. The pump should be inspected 3-4 times per year for pump movement or buildup of debris on the switch or float. Reposition pump if it has moved. Remove any debris that could interfere with the operation of the switch.

3. Pedestal sump pump models have open, exposed motors. Make sure the motor does not get wet.

4. This pump may contain dielectric oil for cooling. This oil can be harmful to the environment. Check the state environmental laws before disposing this oil.

5. The pump motor is equipped with automatic resetting thermal protector and may restart unexpectedly. Protector tripping is an indication of motor overloading as a result of operating the pump at low heads, excessively high or low voltage, inadequate wiring, incorrect motor conditions, or a faulty motor or pump.

</tbody>
</table>

### CAUTION

*Pump may start unexpectedly.*

Disconnect power supply before servicing.

---

1. Contact an electrician.
2. Replace switch kit.
3. Remove obstruction to ensure free motion of switch.
4. Remove obstruction in discharge piping.
5. Do not use an extension cord.
Congratulations!
You are now the owner of a quality Hallmark Industries’ Submersible Sewage Pump. The product that you have purchased has been manufactured using the latest techniques, best materials and quality workmanship.
